INTRODUCTION

I am a fullstack developer with specialization in blockchain. My major experience comes from implementing smart contracts, writing unit test cases and deploying applications to production. I can write backend systems in nodejs and rust with CI/CD pipelines and containerize it on docker. I have experience in launching and maintaining production applications with 5M+ users.

INDUSTRIAL EXPERIENCE

- **Stellar Code** Thane, India
March 2024 - Ongoing
Senior Blockchain Developer
 - Lead a team of frontend, backend and blockchain developers. I review pull requests by developers and merge with production code. I integrate and deploy the final code, monitor and maintain it on production environments like AWS EC2 and AWS lambda. I also help create Docker images for deployment.
 - Solana Rust Development: worked on airdrop smart contract with 10k+ transactions, worked on multi level commission distribution smart contract, worked on arbitrage smart contract.
 - Solidity Development: Worked on a DAO with governance and treasury smart contracts, built a payment distribution system using a cross chain bridge, deployed NFT collections with opensea setup and metadata hosting. I use Nodejs for most of my backend operations along with python.
 - Handled live server with 5M+ users. worked on listening to events and monitoring real time data.
- **Element Zero Labs** Pune, India
Feb 2022 - Jul 2023
Blockchain Developer
 - I worked with a team of 4 blockchain developers. Planned and executed smart contract infrastructure for the products like off chain crypto price medianizer, NFT marketplace, Staking pools, Meta transactions, Decentralised Exchange, Cross chain bridge using wormhole protocol and Custodial wallet system
 - I also worked on launching IDO for tokens using launchpads like pinksale and gempad.
- **Element Zero Labs** Remote
Dec 2021 - Feb 2022
Fullstack Developer
 - Contributed to backend system with DeFi trading protocol focusing on decentralized asset trading and liquidity
 - Worked on dynamic frontend, real time state management, Redux and Redis. I also made custom react hooks for state management and setup event loops with reactjs
 - Developed a backend codebase with MVC framework. Worked on another codebase with microservices architecture with nodejs
 - Integrated backend REST APIs with frontend and made everything functional.

EDUCATION

- **Mumbai University - Datta Meghe College of Engineering (DMCE)** Mumbai, India
Apr 2018 - May 2024
BE - Bachelor of Electronics Engineering

PROJECTS

- **Solana referral model with multi level commission**
Rust, Node.js, React.js, AWS
 - Built a dapp with referral model that pays out commissions based on a 20 levels compensation plan. The commission distribution was built on the solana blockchain. The project has been live on the mainnet since july 2024.
- **Custom DAO platform on Polygon**
Solidity, Ethers.js, Node.js, AWS
 - Built a dapp for a community to hold a DAO treasury containing various crypto assets. There is also a governance contract where users can submit proposals to get funded from the treasury or make a decision to use treasury funds for betterment of the community.
- **Solana Arbitrage & Liquidity Bot**
Rust, Node.js, React.js, AWS
 - Built a bot on solana that identifies arbitrage opportunities on various dexes like raydium, orca and meteora. Then makes an arbitrage transaction for a small profit.
 - The bot can also add liquidity to high yield liquidity pools based on daily volume, and remove liquidity once the yield drops.

POSITIONS OF RESPONSIBILITY

- **Head of Blockchain**, managed and leaded the blockchain team
- **Workshop Host**, Teaching solidity development in 2 days and 6 days hands on workshops
- **Technical Head**, IETE committee

CERTIFICATIONS

- Blockchain A to Z: Blockchain Theory & Fundamentals
- Hands-on Solidity Bootcamp
- Complete MERN stack development course - React.js, Node.js & Firebase
